ABSTRACT

With the rapid development of internet, e-commerce had been widely using by more and more people, so we had an online shopping. A florist shop online system was designed and implemented based on the analysis of the actual needs of users. The system could achieve the flower sales in online that are highly efficient and convenient to the people. This project is based on the website; the whole content was online flower shop. From this website we can easily buy the flowers, bouquet and other decoration from flowers to decorate the houses, cars and for decorating functions. The website can help to manage time in busy schedule, if you suddenly decide to give a flower bouquet to their near ones at that time doesn't have time in that time they will use the online flower shopping system to buy the flower bouquet and get delivered to the place that they wants. By the opening of website the user can view the entire webpage, from which the user can scroll and view the whole page and view the products. If the user want to buy something they can directly click on the product and check the details of the product and select the payment option and then precede to checkout finally the order will be placed. If the user wants to contact with the owner, he/she can directly go to the contact us page and he/she can directly contact with mail to the owner.
