Assistant Professor,
Department of Computer Applications,
Shri Shankarlal Sundarbai Shasun Jain College for Women,Chennai-17.

ABSTRACT

The purpose of this project is to develop a computerized and mobilized food ordering system that can be used to revolutionize the traditional ordering system that currently implement in our college. Thus, this computerized and mobilized food ordering system is designed to assist the business routine in terms of having better management as well as easy for students to avoid long queues and being late to class after recess. Both students and faculties wish to have a way to reduce or get rid of this waiting time. One solution to this problem is to have a system by which once the order gets placed it is directly displayed on a monitor in the kitchen. This would avoid time wasted at the long queues in the counter and also students can pay through e-wallet or through cash on the counter.
