Guide Name: Ms.S.Sudha
Assistant Professor,
Department of Computer Applications,
Shri Shankarlal Sundarbai Shasun Jain College for Women, Chennai-17.

ABSTRACT

The main objective of the Donation Management System is to develop a web application for an organisation, to analyze the current requirement and approve the donations. In a highly populated country like India, food, clothes and books wastage is a disturbing issue. Instead of wasting these things we can put them in use by donating to the needy people. This Donation Management System aims at satisfying the requirements of the organisation called 'Over The Rainbow' through donations over the internet. The website shall ask the new user/donor to register in the system and then fill a form by giving required details. After registration, the users can login using the given credentials. The users can donate any daily necessities like provisions, old/new clothes, books etc. The donors can also choose for a pick up and delivery service in which they will have to upload a picture of what they are willing to donate. Within a week the pick up will be confirmed, scheduled and delivered to the respective organisation. Later the donor will receive a confirmation mail from the organisation.
